

RUSTY JOE

A simple but powerful glitch tool, just plug and play to melt your mind.

The Rusty Joe comes in a lot of different colorways and each unit is a unique piece of art.

I've found a few different circuit boards, so not all Rusty Joes are the same and each version has its own character.

You get two SCART to RCA adapter with it, one for TV OUT and the other one goes into one of the inputs VCR1, VCR2 or CAM/SAT

You can freely combine all these video effect knobs, but there is no need to turn up all knobs at the same time. Some effect combinations can overwrite others, some can lead to sync loss, but in general you get stable glitch signals. Some of the added effect knobs are linked directly to the inbuilt contrast, sharpness and color knob. To get the most effect on all added knobs, the inbuilt enhancer knobs need to be turned almost full in, set the TV control to out + enhancer switch to ON

First and foremost, Mezkalin Video Gear is built to use it directly with a good CRT.

Flat TV's and other digital devices like a beamer or capture cards can lead to blue screening and drop outs.

US customers*

A power supply for the US is not included.

What you need is a standard 12V power supply.

12V DC

500ma or more

center positive

2.1mm center pin
